

Spybot Search & Destroy® Instructions

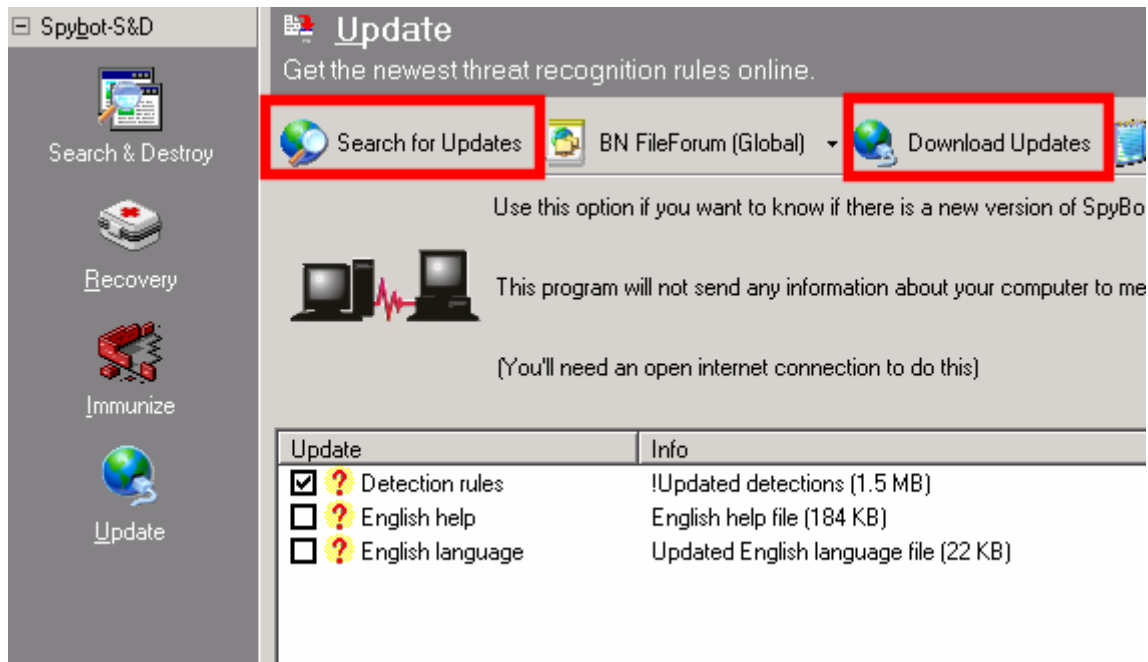

Spybot Search & Destroy® is a registered trademark of Safer Networking Limited and is offered as a free spyware detection tool. The Spybot Search & Destroy® team does accept donations for their work towards fighting spyware. More information about this product is available on their web site at <http://www.spybot.info/en/index.html>.

The following is a brief tutorial of how to use Spybot Search & Destroy® to scan your computer and Immunize your browser for additional protection. For advanced features or further information please consult the Help files or the authors web site.

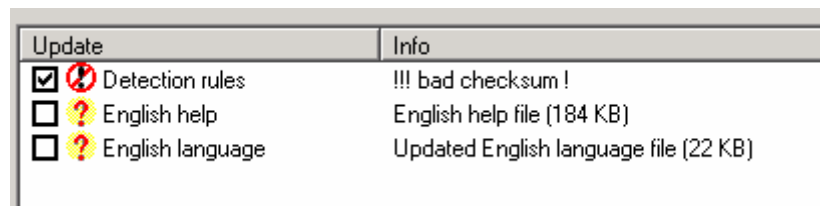

Start Spybot Search & Destroy® by double-clicking the **Spybot Search & Destroy®** icon on your desktop.

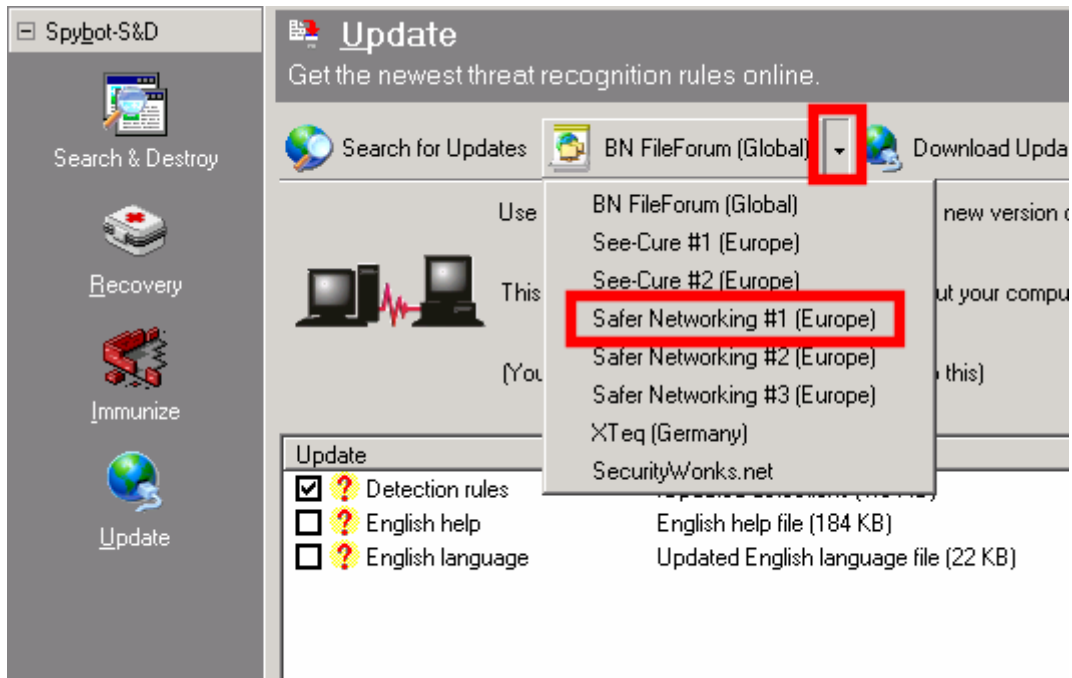

Click **Search for Updates**. This **will** require that your Internet connection is already established. However normal scans will not require an Internet connection.

Click the **Search for Updates** button at the top of the screen. Once the list appears as shown, click the **Download Updates** button.

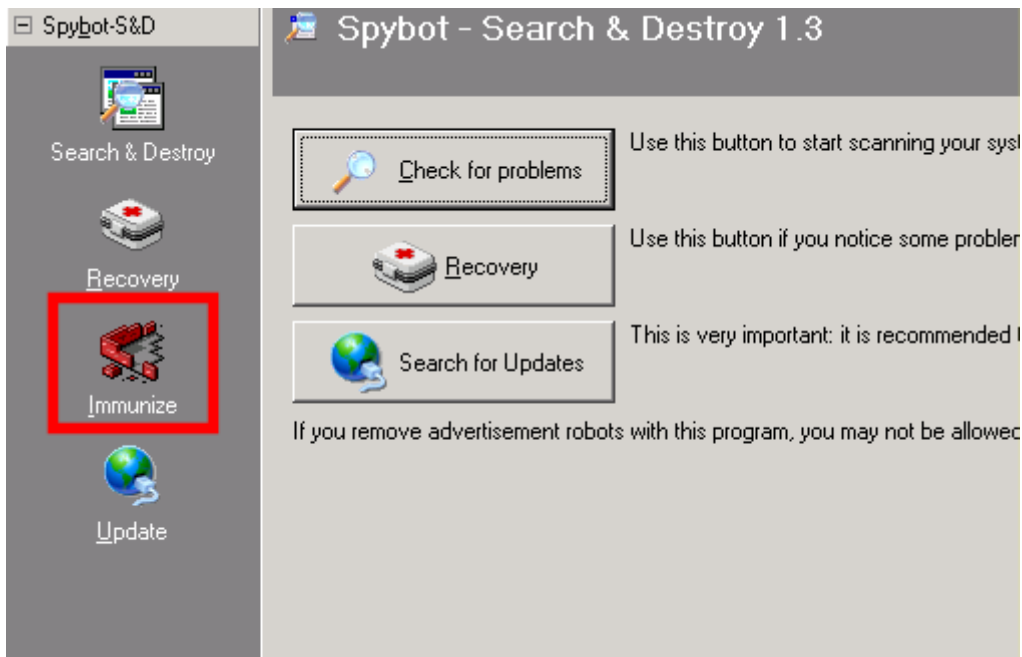

If you receive the above error downloading updates, follow the instructions below to select another server.

Click the **dropdown arrow** and select another server. Then click the **Download Updates** button again.

Update	Info
<input checked="" type="checkbox"/> ✓ Detection rules	!!! bad checksum !
<input type="checkbox"/> ? English help	English help file (184 KB)
<input type="checkbox"/> ? English language	Updated English language file (22 KB)

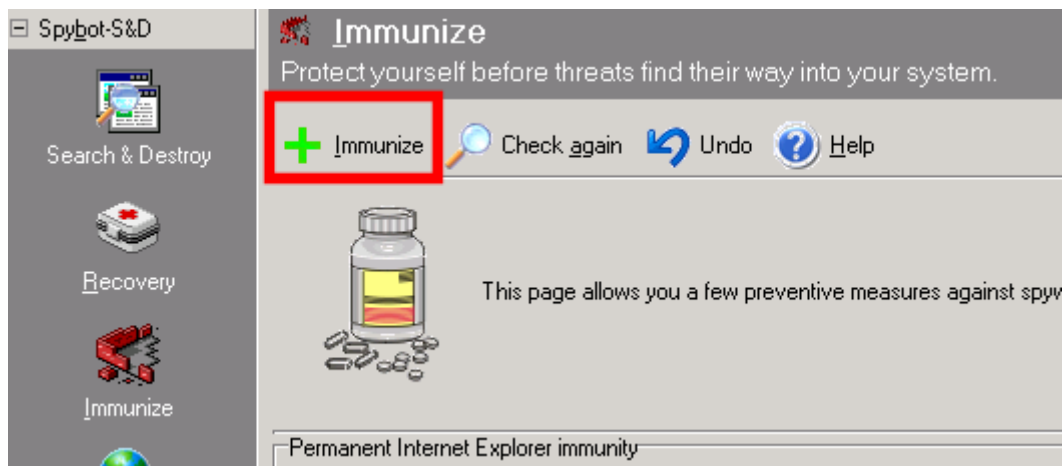

A successful download will be similar to the above screen.

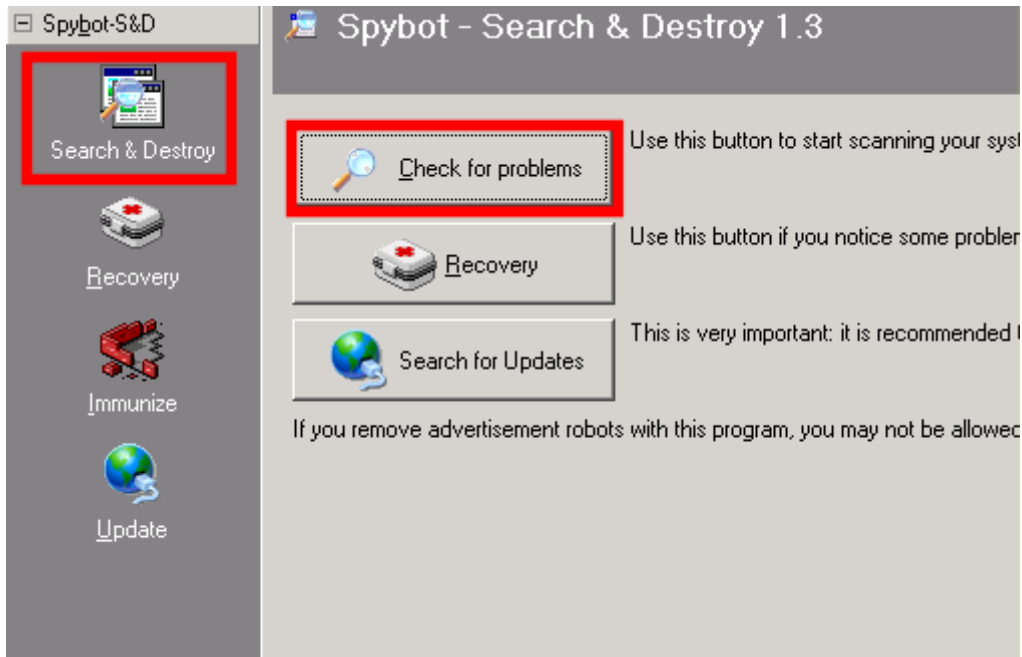

Click the **Immunize** link on the left.

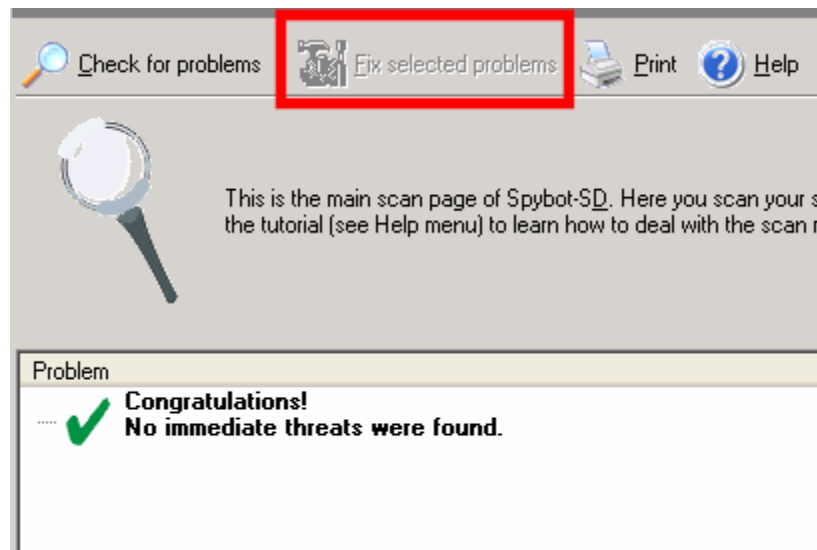

Click **OK** if you receive the above prompt.

Click the **Immunize** button.

Click the **Search & Destroy** link on the left and click the **Check for problems** button. This will begin your scan.

If there are no threats are found you will see the above screen. If threats are found, simply click the **Fix selected problems** button to remove the items from your computer.
